

## INSPECTION, TESTING & CERTIFICATION

The Electricity at Work Regulations require all employers to establish and maintain a written programme relating to the design, construction, operation and maintenance of their electrical system and equipment including a planned maintenance programme, of which regular inspection is an essential part.

To comply with this legislation Kestrel Electrical Systems offers the following services in accordance with IET Regulations and we automatically issue reminders for re-tests:

- Annual Safety Check of Electrical Wiring
- Electrical Installation Condition Report
- Portable Appliance Testing
- Thermal Imaging Survey

All inspection work is carried out by our qualified engineers in accordance with current British Standards and a current NICEIC report is issued on completion.
